

Merlinus Liberatus,

BEING AN

ALMANACK

For the Year of our Redemption,

1754.

Being the Second after *Bissexile*, or *Leap-Year*.

And from the Creation of the World, according to the best History, 5703.

And the 62d of our Deliverance by K. William from Popery, and Arbitrary Government.

But the 58th from the

Horrid, Popish, High-Church, Jacobite Plot.

Wherein is contain'd all Things fitting and useful for such a Work, as an Ephemeris of the Daily Motion of the Planets, with their various Configurations, Aspects, Conjunctions, Lunations, Eclipses, Astronomical, Astrological, Meteorological Observations, the Rising and Setting of the Sun, Moon, Planets, and fixed Stars, illustrated with Tables of the Tides, Terms, and Daily Equation of Clocks, Length and Break of Day, &c. Also a Vindication of Stellary Influence; with two Exemplary Nativities, shewing the Power of the Stars, and Verity of Astrology.

To which is prefix'd,

The Protestant Remembrancer.

Calculated for the Meridian of *London*,

Whose { Longitude } is { 24 } Degrees { 20 } Minutes.
 { Latitude } { 51 } { 32 }

By JOHN PARTRIDGE.
Etiam Mortuus Loquitur.

LONDON: Printed by R. REILLY, for the
Company of STATIONERS.

Wm. Miller, R.

PROLOGUE, or INTRODUCTION

READER, whoe'er thou art, that deigns to look
Unprepossess'd upon the following Book;
Whether thou art a Whig or Jacobite,
For Freedom or Hereditary Right;
Look o'er this Page with an impartial Eye,
And, if it pricks thy Conscience, throw it by:
But, if to read it through thou art inclin'd,
I'll tell thee first what here thou shalt not find:
Here's nothing for a Popish Bigot's Choice,
To make the Tories sneer, or Jacks rejoice;
Here are no *Romish* Jests, or Popish Satyr,
Against reformed Converts, or their Martyrs:
Here no Dispute of *Perkin* thou shalt find,
To prop his spurious Claims of any Kind;
No Principles from *Rome*, in Masquerade,
Shall slyly here our Liberties invade:
No rude Reflections on our Government,
To give Disgust to Wise or Innocent:
No Cant from *Rome*, disguis'd with formal Face,
To spread Sedition in a sly Grimace:
No Ceremony here I shall proclaim,
To blow up Fools, or Knaves, with a false Flame:
Nor shall I Opposition here inspire,
To lawful Pow'r, and raise a Popish Fire:
No Party Wranglings here, or holy Jars,
To break our Peace, or raise intestine Wars:
Religion is not ty'd to Statesmen's Rules,
The Shibboleth of Knaves, and Snares of Fools;
But all may in the following Pages find
What will direct and teach an honest Mind.

The Protestant Remembrancer continued. 1754.

Being an Historical Account of the Horrid Plots and Conspiracies of the Papists, to murder the Protestants in England.

THE next hellish Design, after the *Spanish Invasion*, was the *Powder-Plot*, in 1605. This horrid Plot was contrived by Jesuits, Priests, and other *English Papists*; who, by undermining the Parliament House, and planting there thirty-six Barrels of Gunpowder, intended, when both Houses were sitting, to have blown up the King, Queen, Prince, and all the Royal Issue, with the Nobility and chief of the Gentry of the whole Kingdom; all should, at one Blow, have become a Sacrifice to the bloody-minded Papists. A Villainy that no Age can parallel, and which was miraculously detected by the Finger of God, in their dark Vaults and Cellars, when the very Train was laid, and Fire almost put to it. In this Conspiracy were *Catesby, Piercy, Faux, Digby, Garnet, Hall, &c.* all Popish (*alias* hellish) Priests, were considerable Actors, and all sworn to Secrecy with Oaths, Imprecations, and the holy Sacrament; engaging never to shrink from the Execution of this hellish Design. All which, by the good Providence of God, was happily detected, and the Conspirators brought to condign Punishment. *Laus Deo.*

The next Plot (that was put in Execution) was also contrived by (those hard hearted *Pharaohs*, those Miscreants of Hell) the Jesuits and Popish Priests, was the Conflagration of our famous Metropolis, the City of *London*. This Holy Act (as they called it) they learned of their Predecessor *Nero*, that hellish Tyrant or Devil upon Earth; who, when he had set *Rome* on Fire, charged it upon the Christians: So the Papists charged this most wicked and hellish Action upon the Protestants; when it is proved, by above fifty Depositions, to be an intire Plot and Conspiracy of the Papists only. This Fire began in *London*, *September* the 2d, O. S. about Two o'Clock in the Morning, 1666, and proceeded first from a lighted Fire-Ball put into the House of *Mr Farriner*, a Baker in *Pudding Lane*, by one *Robert Hubert*, a *French* Papist, and who staid while he saw the House in a Flame. This Fire continued spreading, far and near, for the Space of near four Days, till it had burnt down 13,200 Houses, which stood upon 337 Acres of Ground within the Walls, and 65 Acres 3 Roods without; besides 89 Parish Churches, *St Paul's Cathedral*, the *Royal Exchange*, the great *Guild Hall*, the *Custom house*, and many magnificent Halls and public Edifices, with great Quantities of Household Stuff and Goods of all Sorts; so that the whole Loss is computed, by an ingenious Person, to amount to 9,900,000 Pounds.

THINK OF THIS, AND ABHOR POPERY.

A Table of the Moon's Age every Day throughout this Year 1754. Whereby, with the Help of the next general Tide Table, the Time of High Water at all those mentioned Places is shewed by Inspection.

Explanation of this, and the following Table.

Find the Month on the Head, and the Day in the First Column on the left Hand, and in the Angle of Meeting you have the Day of the Moon's Age, with which enter the following Table, and you'll find the Time of High Water at all the Places above mentioned.

Example. January the 15th, you'll find the Moon 22 Days old, and over-against 22, in the first Column of the next Table, you'll find 8 Hours 36 Minutes, which is the Time of High Water at London, Timmouth, Hartlepool, &c. &c. *Et sic de ceteris.*

Enter this Column with the Moon's Age, and over-against it you have the Time of High Water at the Places above-mentioned. *Whitby, Galacia, &c.*

A general Tide Table, shewing the Time of High Water at all the Places herein mentioned, viz.

Enter this Column with the Moon's Age, and over against it you have the Time of High Water at the Places above.

A Table of the Terms and their Returns, for the present Year of our Lord 1754.

Hilary Term begins Jan. 23, ends Feb. 12.

Returns or Elfoign Days,	Exc.	Ret.	Ap.	D. W.
In eight Days of St Hilary,	Jan. 20	21	22	23 Wedn.
From the Day of St Hilary in 15 Days,	27	28	29	30 Wedn.
On the morrow of Purit. of bl. V. Mary,	Feb. 3	4	5	6 Wedn.
In eight Days of the Purif. of bl. V. Mary,	9	10	11	12 Tuesd.

Easter Term begins May 1, ends May 27.

From the Day of Easter in 15 Days,	April 28	29	30	M. 1 Wedn.
From the Day of Easter in 3 Weeks,	May 5	6	7	8 Wedn.
From the Day of Easter in 1 Month,	12	13	14	15 Wedn.
From the Day of Easter in 5 Weeks,	19	20	21	22 Wedn.
On the morrow of the Ascension,	24	25	26	27 Monc.

Trinity Term begins June 14, ends July 3.

On the morrow of the holy Trinity,	June 10	11	12	14 Frid
In eight Days of the holy Trinity,	16	17	18	19 Wedn.
From the Day of the holy Trinity in 15 Days,	23	25	26	27 Thurs
From the Day of the holy Trinity in 3 Weeks,	30	1	2	3 Wedn.

Milbarlmas Term begins Nov. 6, ends Nov. 28.

On the morrow of All Souls,	Nov. 3	4	5	6 Wedn.
On the morrow of St Martin,	1	13	14	15 Frid
In eight Days of St Martin,	18	19	20	21 Thurs
In 15 Days of St Martin,	25	26	27	28 Thurs

N. B. No Sittings in Westminster-Hall on Ascension-Day.
Midsummer-Day, and the 2d of February.

The Exchequer opens eight Days before any Term begins,
except Trinity, be'ore which it opens but four Days.

Note, That the first and last Days of every Term, are the
first and last Days of Appearance.

The Law is good, if it as well were us'd,
By Bribes and Favour it is much abus'd;
That many a good Cause is lost for Want
Of Friendship, Favour, where the Money's scant.

January hath XXXI Days.

Awake my slumb'ring Mute, prepare to fly
 Into the Regions of the spang ed Sky,
 To ransack the celestial Spheres above,
 And Tidings bring of *Saturn, Mars, and Jove*
 Then to the Reader make thy Thoughts appear,
 And bid him welcome to thi new born Year.

February hath XXVIII Days.

When first the All-wise Being did disperse
His mighty Works quite round the Universe,
The Sun, the Moon, and Stars, created he
For Signs, for Seasons, Times, and Years to be:
The Sun to rule by Day, the Moon by Night,
And each illuminate our Globe with Light.

March hath XXXI Days,

And, if the Stars for Signs created were,
 Something significant must needs appear;
 From their Configurations and Aspects
 We may be sure to feel divers Effects:
Hermes squares Chronus now, from card'nal Signs,
Blows up a Flame to treacherous base Designs

April hath XXX Days.

Cyllenius retrograde with Sol doth meet,
 The Cyprian Queen with Hermes also greet;
 Whose gentle Rays with sweet and pleasant Show'rs
 Gently bedew the Trees and naked Bowers;
 And near the End the bright vesperian Star
 Aids Chronus, Sol, and Jove to cool the Air.

May hath XXXI Days.

Chronus opposes Mars from tropic Signs.

A numerous Train of very ill Demons

Are now concurring; and by Mercury

With Phaeton doth frown and disfigure;

Bad Actions and Disasters now abound

Amongst Mankind: Justice can scarce be found.

June hath XXX Days.

Heaven's active Post doth the Infortunes greet,
Zeus and Mavors in the Lion meet;
The great Malignant angry Rays emit,
To fair Hortensis and the nimble Ship.
Thus Heaven's Clockwork by its various Motions,
Foretels the World of Wars, & great Commotions.

July hath XXXI Days.

M 14

Heaven's brightest Lamp frowns on the fullen Star,
 Fair Aphrodite Carets the God of War;
 But above all observe the Beautifous Scene,
 Zeus combined with the Cyprian Queen;
 Hermes to Jove now speeds with winged flight,
 Then view all four, for 'tis a glorious Sight.

1				Δ	4	3 13	1M 32	9A 43	This Month affords a notable Congress of the Planets in the Regal Sign Leo, (viz. Jupiter, Venus, Mars, and Mercury,) which Astrologers say, is the Ascendant of Italy, Sicily, Apulia, Bohemia, Gallia, part of Turkey, and of Cities & Towns Rome, Damascus, Prague, Syracuse, Rasenne, Cremona, Ulms, & Confluence, from which Places you may expect to hear of great Councils, Meetings, Synod and Debates about Religion and Religious Rights & Ceremonies. The 22d of this Month, the hopeful Princess Caroline Matilda was born A.D. 1751.

Old Chronus now Smiles on the Queen of Love.
Her Charms the fullen Anchorite can't move ;
Then in a Pet, he straitway doth decline,
And on bold Mavors cast his friendly Trine ;
But tell's what's next ? Great Jove salutes the Sun,
Prefaging some great Matters to be done.

September hath XIX Days.

This Month is usher'd in with Rays benign,
 With friendly Beams Sol doth on Phænon shine;
 The active Agent of the Starry Train,
 With all the Five would Unity maintain,
 Yet shortly after Saturn, on Mavor's frown,
 This bodes no good, either to Church or Crown.

October hath XXXI Days.

Titan and Stilbone in the Ballance meet,
Hermes and Mavors do each other greet;
Phænon and Phaeton do friendly shine,
Phæbus and Gradivus together join;
Times would be good, if Men would learn to shun
The Paths of Vice, which have the World undone.

November hath XXX Days

Titan on Chronus gently doth dispence,
Likewise on Joye, his Royal Influence;
See how Cytheria, and the fullen Star
Unite their Beams; they mean no open War;
Hermes his Square to Zeus doth declare,
About the middle, a disturbed Air.

December hath XXXI Days.

Phæbus, and Hermes in the Archer meet,
 And with a Frown Titan bright Jove doth greet;
 See how Cyllenius, and the Warlike Star,
 Unite their Beams; the menace many a Jar.
 The same from Jove's and Mavor's hateful square,
 So in Confusion I must end the Year.

**A TABLE of the common Notes and Moveable Feasts
for the Year of our LORD 1754.**

Golden Number	7	Shrove Sunday	Mar. 4
Cycle of the Sun	27	Easter-day	April 14
Epact	6	Holy Thursday	May 23
Roman Indiction	2	Whit-sunday	June 2
Dominical Letter	F	Sundays after Trinity	24
Number of Direction	17	Advent Sunday	Dec. 1
Sundays after Epiphany	4	Year of the Julian Perid	6467
Septuagesima Sund. Feb.	10	Year of Dionysian Per.	83

A TABLE of the 12 Signs, 7 Planets, and Aspects

♈ Aries, <i>Head and Face.</i>	♄ Saturn.
♉ Taurus, <i>Neck and Throat</i>	♃ Jupiter.
♊ Gemini, <i>Arms and Shoulders.</i>	♂ Mars.
♋ Cancer, <i>Breast and Stomach.</i>	☉ Sol. or the Sun.
♌ Leo, <i>Heart and Back.</i>	♀ Venus.
♍ Virgo, <i>Bowels and Belly.</i>	☿ Mercury.
♎ Libra, <i>Reins and Loins.</i>	☾ Luna the Moon
♏ Scorpio, <i>Secret and Bladder.</i>	♏ Dragons Head.
♐ Sagittarius, <i>Hips and Thighs.</i>	♏ Dragons Tail.
♑ Capricorn, <i>Knees and Hams.</i>	✚ Part of Fortune.
♒ Aquarius, <i>Legs and Ancles.</i>	♁ Tellus or Earth
♓ Pisces, <i>Feet and Toes.</i>	<i>Venus is a Morning Star to the 26th of March, at which Time she becomes an Evening Star, and so continues to the Years end.</i>
☿ Conjunction, <i>In one Sign & Degree.</i>	
* Sextile, <i>is 2 Signs or 60 degrees.</i>	
□ Square or Quartile, <i>is 3 Signs or 90d.</i>	
△ Trine, <i>is 4 Signs or 120 degrees.</i>	
♌ Opposition, <i>is 6 Signs or 180 degrees.</i>

P A R T R I D G E, 1754:

*Aphorisms concerning the nature of celestial Bodies
their admirable Power and Energy on the
sublunary World, on the Air especially.*

GOD ALMIGHTY, the great and wise Creator, blessed for ever (for no legitimate philosopher or astrologer can exclude him) is not only in himself, but even in his works incomprehensible.

Amongst his other infinitely various operations, he is admirably discovered in the constitution of the air, and its strange vicissitudes; which the divine word unquestionably produceth, by a second inferior cause or generant.

The theatre on which these alterations are hourly acted, being the open air: Mankind hath more easily arrived at some little apprehensions of this second cause, the region in which they are presented, being so near and pervious.

As reasonable as it is to believe, that the sea comprehendeth all the seminal causes of her productions, and the earth of what is bred in her bowels also; so natural is it to imagine, that the heavens are not idle, but rather give spirit and influence to all things under their convexity; viz. the air and its regions, with the globe of water and earth; these being but minor orbs, all inclosed within the vast embraces of the major; even as the foetus is embraced by the womb, and the membranes that are agnate to it.

The world therefore in all ages hath been convinced, that the heavens have no small power on the premises, and every body within their respective inclosures, on the air especially, and its phenomena, the meteors (as they are distinguished vulgarly into) real or apparant.

Of these latter, none go about to deny, that the Heavens are the due efficient, whether halos, rainbows, paraelia, paraselenæ, chasms, clarities nocturnal, the morning and evening blushes of the heavens: but no less are they the due effective of the former, the real ones (though some sceptics carp and deny it) whether clouds, rain, mist, dews, fiery trajections, *ignis fatui*, lighting, thunder, blasting, frost, snows, hail, winds.

Of all these, whensoever they happen, whether in measure or excess, ordinary or prodigious; and these again
whether

PARTRIDGE, 1754:

whether homogeneous or heterogeneous, homogeneous, such as those dire tempests called of old *Ecnephia*, *Exhydria Fistula*; *Plin. hist. nat.* II 48, 49. (known amongst us by the names of Spouts, Hurricanes, Tornados, Trava-dos, &c. &c.)

The same is most justly acknowledged the cause of the motion of the sea, its ebbs and flows, &c. from the preceding aphorisms of the learned *Goad*, I shall assert the following

DILEMMA.

That no star in heaven was made for Illumination only: they were made for *ἰσχυρισμοί*, Influences; ergo, the effluvia of the celestial bodies emanate on all sublunary bodies. 2dly, as all celestial bodies are lucid, either by an innate or reflex light; and light being not a bare visible quality, but endued with its specifick power, consequently they must all of them have an energy homogeneous to it.

I cannot better illustrate this, than in the words of that eminent and learned philosopher *Boyle*, in his history of the air. — Generation and corruption being the extremes of motion and rarefaction, and condensation the mean ones: he shews that the effluvia of the heavenly bodies, as we find them, immediately contribute to the latter, must also have a mediate influence on the former; and consequent, all physical bodies be affected thereby. It is evident, that the properties of moisture, heat, cold, &c. employed by nature to produce the two great effects of rarefaction and condensation, almost wholly depend on the course, motion, position, &c. of the heavenly bodies. And it is also clear, that every planet must have its own proper light, distinct from that of any other; light not being a bare and visible quality, but endued with its specific power. The Sun we know, not only shines on all the planets, but by his genial warmth calls forth, excites, and raises the motions, properties, &c. peculiar to them, and his rays must share or receive somewhat of the tincture thereof; and thus tinged, be again reflected into the other parts of the world, and particularly the adjacent bodies of the planetary system; whence, according to the angle, the planets make with that grand luminary, and the degree wherein they are enlightned, either by his direct or oblique rays; together with their distance and situation in respect to our earth: the powers, effects,

PARTRIDGE, 1754:

'or tinctures proper to each, must be transmitted hitherto;
'and have a greater or lesser effect on sublunary things.—
'Vide *Mead de imperio Solis, &c. Lunæ, &c.*'

Let Theology itself teach us, that the Sun is a great minister, the light and life of the world; without it, no difference of clime or season, no spring, no summer, no autumn; all time would be winter, horrid winter; the sea a mountain of ice; the land a flint; and darkness would usurp his old dominion over both. God gave the Sun his royal commission, the which he most faithfully and justly executes, by penetrating and invigorating all things; there is nothing in the whole universe, that is hid from his heat and influence: At his rise, the morning clouds vanish, the fog dissolves, and the dew gently exhales; towards mid-day, he brighteneth the air into a cheerful sapphire, and gildeth the borders of the very clouds with a costly limbus; all the earth basketh in his light, while the clay is calcin'd by his heat: when he pleaseth he imprinteth his face on the rocid cloud, and decircinates the Iris with his pencil: he draweth the waters as thro' an alembek, and gageeth the depths with his beams: the currents of the seas observe his tekuphas, and flock all to the place of his residence, where he keepeth court, is the greatest conflux, the very streams make haste to kiss his feet. The sun by his vertical strength raiseth thunders, and gives fire to the priming of the clouds; he raiseth Zephyrus out of his den, which yields a gentle breeze in the estival morning, and fanneth the husbandman in the evening. It is the potent Sun that banisheth the most sharp and tedious frosts, and by the power of his spell confineth it to the ends of the earth; he dissolveth the deepest snows, and the vapours of the night fly before him. the flowers of the field open for his entertainment, and the birds of the air observe his night watches; they give a signal as from their watch tower, and chaunt their reveille to the sons of the night; all the clients of the sky flock after him and retreat dishonourable at his retirement: the life of animals subsist by energy, nay of our immortal spirits he is the union. (saith a learned theologue.)

I. Meteorological Observations

THE learned *David Origanus*, hath intimated unto us, that the air doth frequently relent and be-

P A R T R I D G E, 1754.

sprinkle the earth with showers, when the moist and gentle planet *Venus* enters the rugged sign of *Scorpio*, and I have experimentally found his observation true and very seldom to fail: for a testimony of this, I shall present you with 30 years experience of our planet's influence at her entrance into *Scorpio*; the which we hope, will prove sufficient to justify my author, and to advance this observation into an axiom, for the better strengthening our undertaken plea in defence of stary influence.

I. Anno 1716, *Venus* entered *Scorpio*, and plenty of rain and snow the same day came along with her, November the 25th

II. Anno 1717, *Venus* approached *Scorpio* September 15, it rained then and the day before, though the rest of the month was so hot and dry, being no water in pools, and most rivers near dry.

III. Anno 1718, *Venus* came into *Scorpio* October 31, wind and small rain accompanied her, and November the 1st, was rain *tota die*.

IV. Anno 1719, *Venus* saluted *Scorpio*, thunder and smart showers of rain attended her, viz. August the 27th.

V. Anno 1720, *Venus* made her entrance into *Scorpio*, September the 29th, and it rained that day and the day after

VI. Anno 1721, *Venus* entered *Scorpio* November the 13th, which was dull and cloudy, but heavy rain on the 14th and 15th.

VII. Anno 1722, *Venus* touched the first point of *Scorpio*, September the 2d, when the air was very cloudy, but small rain.

VIII. Anno 1723, *Venus* visited *Scorpio* October the 15th, which was attended with frequent showers of rain.

IX. Anno 1724, *Venus* visited *Scorpio* November the 24th, plenty of rain the 23d and the 24th, *Venus* being now oriental with 2 degrees $\frac{1}{2}$ north latitude.

X. Anno 1725, *Venus* took possession of *Scorpio* September the 14th, & brought rain with her also on the 15th

XI. Anno 1726, *Venus* began her progress into *Scorpio* October the 29th, with a very rainy day to attend her.

XII. Anno 1727, *Venus* approached *Scorpio* August the 27th; my diary gives no rain till the 30th and 31st, I will not peremptorilly contend for it, for *Venus* hath 3 degrees of south latitude, I have not tried her occidental

PARTRIDGE, 1754.

tal variations fully enough as yet, to build any thing thereon.

XIII. Anno 1728, *Venus* touched *Scorpio* September the 29th, attended with cool showers of rain, the rest of the month dry.

XIV. Anno 1729, *Venus* came into *Scorpio* on the 12th of *November*, attended with great rain.

XV. Anno 1730, *Venus* took possession of *Scorpio* September the 2d, strong wind and rain at night.

XVI. Anno 1731, *Venus* visited *Scorpio* October 15, and much rain fell that day and the day before.

XVII. Anno 1732, *Venus* visited *Scorpio* November 24, and brought snow and sleet, that dissolved and took away the frost that began on the 6th by a mild gentle thaw.

XVIII. Anno 1733, *Venus* made her progress into *Scorpio* Sept. 14, and either made, or met the rain and thunder.

XIX. Anno 1734, *Venus* saluted *Scorpio* October the 29th, and was accompanied with a very rainy day.

XX. Anno 1735, *Venus* entered *Scorpio* August 27, and much rain fell the day preceeding, and wind and rain the very same day; she entered the mansion and great floods the 28th.

XXI. Anno 1736, *Venus* made her appearance in the first point of *Scorpio* Sept. 28, when wind and rain accompanied her that day.

XXII. Anno 1737, *Venus* approached *Scorpio* November 12, attended thither with wind and much rain.

XXIII. Anno 1738, *Venus* visited the first point of *Scorpio* September the 2d, accompanied with much rain, that and the two following days.

XXIV. Anno 1739, *Venus* began her progress in *Scorpio* Oct. 14, a blustering stormy night followed.

XXV. Anno 1740, *Venus* touched *Scorpio* Sept. 23, high wind, rain, and sleet attended her.

XXVI. Anno 1741, *Venus* made her entry into *Scorpio* Sept. 14, great rains and monstrous floods just preceeded; observe an Apertio Portarum, ♂ and ♀ both entering this equatick sign, rain more or less for seven days together.

XXVII. Anno 1742, *Venus* entered *Scorpio* Oct. 29, cold wind and fleets of snow and rain the 29th, 30th, &c.

XXVIII. *Venus* visited *Scorpio* October the 28th, wind and some coalling showers, but no great quantity.

P A R T R I D G E, 1754.

XXIX. Anno 1744, *Venus* saluted *Scorpio* September the 28th, which was fair,, but the day or two preceeding was plenty of rain ; but that's not the rule you'll say.

XXX. Anno 1745, *Venus* entered *Scorpio* Novr. 12, rain attended her both on the 12th and 13th.

Thus you see in 30 Years observation, we meet with but one real failure, or one that's liable to exception. A large evidence in defence of one single experiment, and enough to prove a planetary influence to any, that do not wilfully wink the eye against the coelestial light ; I could have enlarged more upon this theme, but a position once well proved is enough ; for tho' it may be oftner, it cannot be better demonstrated ; but this is only one sort of evidence, I have more to bring into court,

II The planet *Mercury* combust in *Scorpio* denotes in temperate weather.

I shall produce you a few instances of this stellary truth, my lotted room will not admit of many.

I. 1730, *October* the 22d, *Mercury* was combust in *Scorpio*, when we had great rains for five days together.

II. Anno 1731, *Mercury* suffered another combustion in *Scorpio*, and brought with him sharp frosts, and very cold turbulent winds, with rain and sleet, the latter end of *November* and beginning of *December*.

III. Anno 1732, the beginning of *November*, *Mercury* was combust in *Scorpio*, and brought a sharp frost that continued to the 22d day ; what say you, doth the rule hold or no ?

IV. Anno 1733, the middle of *October*, *Mercury* was combust in *Scorpio*, when we had sharp frosts, high wind, and very cold dashing storms of rain.

V. Anno 1736, the latter part of *October* and beginning of *November*, *Mercury* was combust in *Scorpio*, and was attended with thunder, great rains, & very sharp frosts.

VI. Anno 1739, the latter part of *October*, *Mercury* was combust in *Scorpio*, then was sharp frosts, wind, sleet, for ten days together ; what think you, may this pass for raging weather, or no ?

VII. Anno 1740, *Mercury* was combust the beginning of *October*, then we had a very cold air, much rain, and stormy turbulent weather.

VIII. Anno 1743, *Mercury* was combust in *Scorpio* the
la ter

PARTRIDGE, 1754.

latter end of *October*, when we had high wind, impetuous storms of rain for many days, and without begging the question, may pass for raging air.

IX. Anno 1744, *Mercury* combust the fore part of *October*, wind and rain were then our visitants.

X. Anno 1745. *Mercury* combust in the fore part of *November*, and brought with him turbid wind and rain, sharp frost with sleet.

XI. Anno 1746, *Mercury* suffer'd another Combustion in *Scorpio*, and brought with him tempestuous wind, dashing rain, and sharp frosty mornings.

XII Anno 1749, in the beginning of *November*, *Mercury* was combust in *Scorpio*, and accompanied with very large and cold rain.

XIII. Anno 1750, in the middle of *November*, *Mercury* was combust in *Scorpio*, then we had very strong harsh wind from the east, followed with very sharp frosts and snow.

These are some of the constant effects attendant upon *Mercury's* combustion in *Scorpio*. Let the ingenious and studious artist, rejoice in so plain and full a proof of astral influence, and give glory to the God of stars for making it known. There are more truths of this nature behind.

I would if my limits did permit, have gone round all the Triplicities, &c. with all the planets, after the same manner (which is not only a delightful but profitable speculation) and shewn you, what planets and parts of heaven produce fair weather, frosts, snows, blites, mildews, &c. for the heavens themselves with the fixed stars, denote variety of weather; which by the planets bodies or beams, are increased or abated. Thus, as the learned Sir *Christopher Heydon* avers, *Scorpio* of itself doth naturally moisten and infrigilate. And, so also do the rest of the signs act and operate, according to their natures and qualities. But I shall wave these matters at present, and proceed to give some stellary truths in the genethliacal part of astrology.

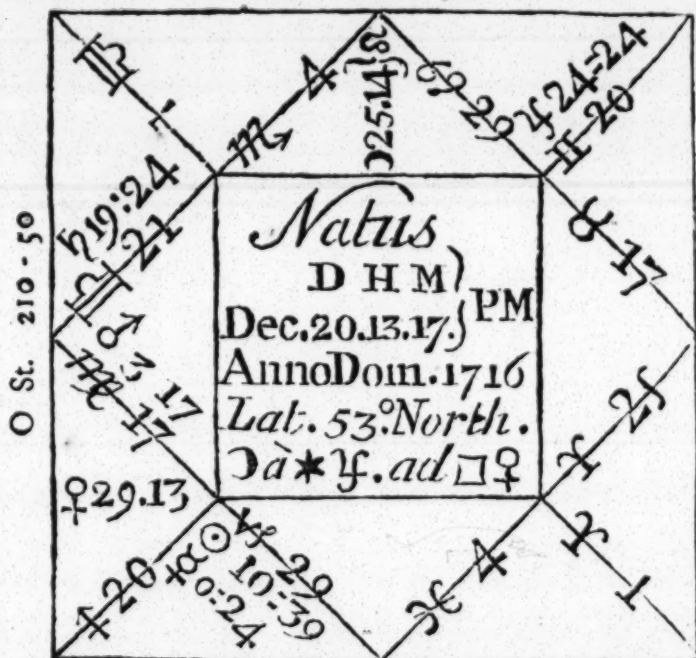

II. Exemplary Nativity.

A Strology is my *Diana* I must confess, and I can no more write an almanack without vindicating it, that

PARTRIDGE, 1754.

than some other of our annual writers can theirs, without traducing it. Whoever hath, or shall malign or traduce this science, we must conclude it proceeds from ignorance and want of skill in understanding the art itself; or such as would have been acquainted therewith, but gruelled with difficulties they found in the way before they could reach the court of the divine *Urania*; and indeed I must own, that the books upon this subject, common among our english students, will, like an *Ignis Fatuus*, lead the indolent and easy readers into a mire of labyrinths, from which, those who want the necessary qualifications of diligence and industry, will never be able to extricate themselves; and therefore, to excuse their own indocile tempers, they have burst into slander and detraction, and bitterly declaimed against all cœlestial verity; and to make good what I have said, shall be the cause of inserting the following nativity. See the scheme.

R. St. 120 - 50

This nativity was brought to me by a student in astrology who desired I would give him my opinion of it in respect of life and death; then he assured me the time given might be depended on for near truth, and that the person died at the

PARTRIDGE, 1754.

the age of 29 years, and near 6 months, (A. D. 1746.) and that himself, and all the pretenders to astrology he had shewn it to (which was not a few) could assign no proper direction for his death from the figure, and therefore, he was apt to believe, the art of astrology was all vanity, and only a chimera. For, to convince such opinionists of their errors, and for the credit of astrology, I have printed this nativity, with the train of directions I assign for his death, and this without altering the figure he gave, a single minute.

The Table of Directions.

	D. M. Y. M. A. D.			
<i>Luna</i> ad $\square$ $\frac{1}{2}$ in mundo dc.	31	20	29	5 1746
<i>Luna</i> ad semiquadrat $\frac{1}{2}$ dd.	33	5	31	2 1748 died
Ascendens ad semiquad. $\frac{1}{2}$	33	6	31	2 1741
Ascendens ad semiquad. $\frac{1}{2}$	36	34		
<i>Luna</i> ad $\square$ $\frac{1}{2}$ in Zod. c L.	36	36		
<i>Luna</i> ad $\square$ $\frac{1}{2}$ in Zod. S L.	37	21		
<i>Sol</i> ad parcel. $\frac{1}{2}$ motu rapto.	38	49		

This is that train of directions that I do assign for his death; if any skilful man is of another opinion, I should be glad to see his doctrine published; as concerning the disease he died of, I think it was a lingering disorder, and began about four years before, under a malefick direction, then operating either by a surfeit or intemperance, and might end in a dropfical disorder, attended with a small delirious fever.

Another

PARTRIDGE, 1754.

and 11 months, as you see marked; and as to the distemper, I judge it will be a very bad sort of a fever.

I am, with all difference to your better judgment, your most humble servant, *W. H.*

The consequent of this affair is thus, at the time I was writing this almanack, I received the following lines,

S I R,

This is to acquaint, that your judgment of that nativity (I desired you to inspect) is now proved surprisingly true, for the child is just now dead of a malignant fever, and at the age of four years, within a few days; and this (with your leave) I am ready to justify upon any occasion that requires it; excuse my present brevity, but in a little time you may expect a small dissertation on the genethliacal part of astrology, from your most obliged servant and well-wisher,

G. R.

I hope I shall not be censur'd as guilty of vanity or presumption, by inserting these examples, having no other view therein, but to shew the verity of this science, and to restore (as much as I can) that regard for astrology, which the most learned in preceeding ages justly conceived of it; and in some part, to vindicate myself from the ill-grounded reflections of some (would be thought) learned gentlemen, who take a pride to ridicule a science which themselves have taken no pains to comprehend.

II. *Judicium Astrologicum, pro Anno, 1754. Of the Brumal Ingress, or, Winter-Quarter.*

WHICH takes its beginning on Friday the 21st day of December, 1753, at 2 hours 28 min. past noon apparant time, when the 10th degree of Π ascends, and the 5th deg. of $\approx$ culminates, $\odot$ lord thereof in δ with the $\odot$ and φ in the 8th, the $\lrcorner$ in the 6th house departing from a $\square$ of $\odot$ and δ of Mars, *ad vacuum* $\odot$ and δ in partil $\square$ from fixed signs; at the luration succeeding this, we find the the $\odot$ $\lrcorner$ and φ all in conjunction under the beams of $\odot$, and φ and δ still in a hateful square and

and in the limits of this quarter we find $\odot$ in δ with the $\odot$, $\odot$ and $\odot$, and the $\odot$ in δ to ψ and $\square$ to δ . These are very untoward positions, and portend some turbulent transactions in matters relating to religion, or that which popish knaves or bigot fools call so; some noise raised by or among a discontented party, to raise a bustle and create disturbances; some rash debates if not actions raised and carried on to amuse the people; but experience manifests, that discontented men grow warm in their false opinions without true reason, and then for envy or emulation espouse a party without just occasion; pride tempts them to envy their neighbour, and envy prompts them to quarrel with their brethren, for causes meerly suppositious; and when they have given into mistaken zeal, to destroy or ruin them: these and such cursed effects commonly flow from pernicious opinions of hot brain'd priests, or priest-ridden zealots, who have embrac'd such popish principles, and are attack'd to popish persecution; some of these men, under the specious name, and august sound of church, act the knaves, and other the fools part; the one with knowledge and design; the other without, endeavours to restore and set the romish religion in our church, and the heathen tyranny of popery in our state; these men are rattle snakes in our woods and fields, and canting puritans in our cities and towns; that scatter their poison among the unwary and innocent, and thereby stir up and irritate some hot and unquiet spirits, into a temper to persecute and destroy their brethren, that they may with more ease and less noise, resume their old romish government and tyranny. The application of *Sol* to *Saturn*, portends great troubles and misfortunes to a certain noble prince.

VI. Of the Vernal or Spring Quarter.

THIS quarter commences this year, on *Wednesday* the 20th day of *March*, at 22 min. past 4 in the afternoon, when 7 deg. of Π culminates, and 13 deg. of $\cap$ ascends, $\odot$ almuron thereof in Δ to ψ , in $\star$ to δ & γ but in Π to δ in 16 deg. ψ in the 5th, in general these positions are more amicable than at the preceeding ingress.

P A R T R I D G E 1754

and portend both amity, peace, and concord, and strong arguments for promoting peace among the christian princes This judgment, will, I doubt, not be so conspicuous and prevalent as might be wisht, for in the confines of this quarter, we have a more in-auspicious prospect; the opposition of ♄ and ♃ from ☿ and ♀, and the conjunction of ♃ and ♃ in ♏, stimulates some mighty changes and great alterations in the world; it denotes great violences and publick wars, unjust usurpations and invasions; the *Venetians* must watch the *Turks*; *Scotland, Holland, Poland and Saxony*, must be careful to suppress mutinies at home, and to preserve peace abroad; *Germany, Denmark and Prussia*, to divert hostilities; the *Muscovites* and *Tartars* at daggers drawing; *France* sick of an ulcer in her own bowels; *Russia* and *Austria* under servile apprehensions of mischief, expect to hear of horrid plots and hostile actions from the *Indian* plantations, misfortunes and loss attend that trade; great evils and hostile actions attend the princes of the roman empire; and foul actions in other parts; cursed ambition is the foundation, and avance the end, they are the parents of the worst misfortunes to mankind; there seems to be great councils and consults on the politick anvil of ambitious princes in the north part of the world; some untoward fever or distemper seems to prevail this and the next quarter; from which, *Libera nos Domine.*

*The starry motions mutually convey,
But act at this time, in no peaceful way;
Sweet influences that would do us right,
Are overcome by Mars and Saturn's spite;
Thrice happy we, that may securely stand,
To enjoy the blessings of a peaceful land.
Thus have we seen the pleasant spring pass o'er,
Which have discover'd things not known before.
See how these wretched times degenerate,
Men by which means, becomes unfortunate.
Statues and politicks do make relations,
What is the cause that so disturb some nations.*

V. *Of the Estival or Summer Quarter.*

THIS Quarter begins on *Friday* the 21st day of *June*, at 16 min. past 3 in the afternoon, when 16 deg. of Ω culminates and 4 deg. of Υ ascends; the planets are all *spra terra* at this ingress, except h , who is in the 3d, and in opposition to the J and Q in the 9th, S ruler of the ascendant in A with V on the cusp of *medium cali*, Q in G with the O in the 8th, the J 's departing from a G with V and the O , and applys to the S of h and G of Q . Here is hopes of halcyon days promised by this ingress, especially to this our *English Zion*, for *Mars* our patron, is disposer of the O , *Moon*, Q , and *Mercury*, and is himself got into the regal sign Ω , the great dignities of the O and in conjunction with V , on the cusp of the house of honour; these glorious positions not only denotes a good harmony between the *English* nation and her monarch, but also shews, in an eminent manner, the lustre and glorious state of this nation, above all others, and how much her friendship and good offices are sought after, by contend'g and distressed powers in foreign parts.

VI. *Of the Autumnal Quarter.*

THIS quarter inchoates on *Monday* the 23d day of *September*, at 34 minutes past 4 in the morning, at which time 10 deg. of Π is culminant, and 15 deg. of Υ possess the oriental angle, *Mercury* almuton thereof, in strong and potent in Δ to h in $\square$ to the $\square$ J . and in $\ast$ to Q . *Jupiter* in mundane Δ to h in $\ast$ to Q . the O applying to G of S , who is in $\square$ to h . the Q is in 28 deg. I in the 4th, applying to the $\square$ of the O in the beginning of E to the Δ of V , and the $\square$ of G and G of h in 11 deg. of that sign. These are very active positions, and no doubt but this proves a time in earnest, we shall hear of mighty armies, and brisk and bloody actions, and particularly from those places mentioned in my judgment, on the *Spring Quarter*; to which place for want of room, I shall refer the reader.

There will be six Eclipses this Year, but all of them invisible to our hem sphere.
